

WebiSmarts System

Weatherproof Bracket for Exhaust Stack GM-42 Detector CAT: BAK-1550

Radiation Detection Division

WebiSmarts utilizes two gamma detectors to calculate and display the concentration of effluent through the exhaust stack and thereby create historical graphs of concentration and a report of activity released between two dates. Both detectors are inserted into stainless steel brackets within the exhaust stack and covered by a PVC jacket on the outside. **The GM-42 Detector is used to measure high releases of effluent in cases where the sensitive PM-11 has saturated.**

* Silicon or any other sealer not supplied

Bracket for Exhaust Stack

Includes:

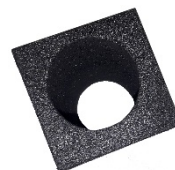

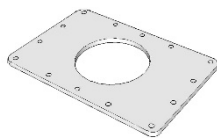

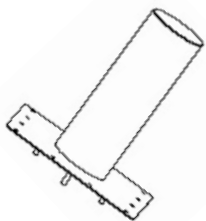

Stainless Steel Bracket

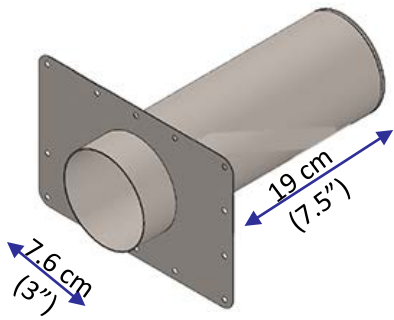

Rubber Seal

PVC Weatherproof Jacket

Detector Spacer

PVC Cable Cover

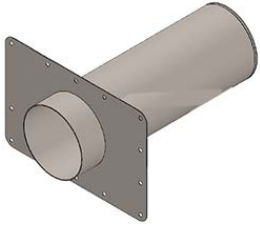

Material: Stainless Steel
