

WebiSmarts System

ROTEM RadMon Detector Bracket for Exhaust Stack (Waterproof) PCAT: P5451GR

Radiation Detection Division

WebiSmarts utilizes two gamma detectors to calculate and display the concentration of effluent through the exhaust stack and thereby create historical graphs of concentration and a report of activity released between two dates. Both detectors are inserted into stainless steel brackets within the exhaust stack and covered by a PVC jacket on the outside.

* Silicon or any other sealer not supplied
