

WebiSmarts System

ROTEM RadMon Bracket (Weatherproof) for Exhaust Stack GM-42 Detector PCAT: P5451GS

Radiation Detection Division

WebiSmarts utilizes two gamma detectors to calculate and display the concentration of effluent through the exhaust stack and thereby create historical graphs of concentration and a report of activity released between two dates. Both detectors are inserted into stainless steel brackets within the exhaust stack and covered by a PVC jacket on the outside.

* Silicon or any other sealer not supplied

Bracket for Exhaust Stack
